

IVR-100G

Test Module Manual

Product images are for illustrative purposes only and may differ from the actual product.

IVR-100G test module is particularly designed for network test engineer to do deployment and comprehensive test for Ethernet and OTN. This module satisfies the current increasingly test demand of Core Network and MAN 100GE and OTU4 such high speed network performance and stability. It fully meets Ethernet standards such as RFC-2544, Y.1564, Multiple Streams, and supports 100 Gigabit Ethernet WAN and LAN network test with high reliability, convenience, and flexibility.

1. Introduction

1.1 Overview

IVR-100G 100Gigabit Ethernet/OTN test module is one of InterVRE modular test products, and which is particularly designed for network test engineer to do deployment and comprehensive test for Ethernet.

This module is designed for satisfying the current increasingly test demand of Core Network and MAN 100GE and OTU4 such high speed network performance and stability. It fully meets Ethernet standards, and supports 100 Gigabit Ethernet WAN and LAN network test with high reliability, convenience, and flexibility.

1.2 Main Features

IVR-100G 100Gigabit Ethernet/OTN test module has the following features:

Ethernet:

- PHY and PCS test;
- Throughput, frame loss, latency, back-to-back test as per RFC2544.
- Ethernet BERT test.
- Allow stream-generation according to VLAN ID/priority, Q in Q and TOS/DSCP configuration.
- Feature-rich stream statistics, error analysis and alarm indication.
- MPLS/PWE3
- Protection switching test, and the accurate time test of the business interruption.
- Support ITU-T Y.1564 test. Pass a test can complete verification of all SLA parameters, so as to ensure the QoS to achieve the design goal.
- Layer 1 to layer 4 loopback test.

OTN:

- OTN testing for OTU4;
- Complete multi-stage Mapping/Multiplexing;
- Ethernet over OTN;

Introduction

- Service Disruption Measurements;
- Overhead monitoring and byte decoding;
- Terminate and Through test modes;
- Per-lane optical power and frequency measurements;
- External clock reference interface;
- Eye diagram reference interface;
- Error Injection and Alarm Generation.

1.3 Compatible Platforms

IVR-100G Ethernet/OTN Test Module is compatible with the following InterVRE test platforms:

- IVR-100p intelligent network test platform.

2. Description

2.1 Front Panel View

Figure 2.1 IVR-100G 100Gigabit Ethernet/OTN Module Front Panel View

2.2 Interfaces

Table 2.1 describes the interfaces of IVR-100G

Table 2.1 Interfaces Description

Interfaces	Quantity	Description
100G Ethernet/OTN Optical Interface	1	<ul style="list-style-type: none"> • Signal: 100Gb/s optical signal; • Type: CFP optical port.
External CLK Interface	1	<ul style="list-style-type: none"> • Signal: External clock signal, support, <ul style="list-style-type: none"> • DS1/E1, • E1, • 2M Hz; • Type: SMA; • Impedance: 50 ohm.
Reference Output CLK Interface	1	<ul style="list-style-type: none"> • Signal: Output a reference clock signal for other equipment; • Type: SMA; • Impedance: 50 ohm.

Description

2.3 LED Indicators

Table 2.2 describes the LEDs placed on IVR-100G as indicators.

Table 2.2 LED Indicator Definitions

Interface	LED	Status	Description
100Gigabit Ethernet	LINK/ACT	Green	Link has been established successfully, but no data frame transmission.
		Green, (Flashing)	Link has been established successfully, data frame is transmitting.
		Off	Link has not been established.
	LASER	Red	Optical signal is transmitting.
		Off	No optical signal transmission.

3. Specifications

3.1 Environmental Guidelines

IVR-100G module can work normally and stably under the severe environmental condition. Table 3.1 defines these environmental conditions which are complied with the IVR-100p platform.

Table 3.1 Environmental Ranges

	Temperature Range	Humidity Range
Operational	-10°C to 50°C	0% to 95%(non-condensing)
Storage	-40°C to 70°C	0% to 95%(non-condensing)

3.2 Other Physical Specifications

IVR-100G module's some other physical specifications are described in Table 3.2.

Table 3.2 Other Physical Specifications

Specification	Description
Power consumption	< 42W
Dimension	Dimension (H×W×D) = 25mm x 97mm x 259mm;
Weight	< 0.4kg

Safety

4. Safety Information

4.1 General Safety Information

If the device has not been stored properly under the storage temperature range, the device's temperature must be guaranteed to reach the operational temperature before turn it on (*Specific environmental information can be found in Table 3.1*).

4.2 Laser Safety Information

- Do not install or detach fibres directly when a light source is activated;
- Do not attempt to look directly into the fibre, in case your eyes will be injured by optical signal;
- The device is Class 1M laser product, complies with IEC 60825-1 Amendment: 2001 and 21 CFR 1040.10, hence invisible laser radiation could be emitted from optical fibre output port;
- Safety can be guaranteed by operating the device under a predictable and reasonable conditions, however using an optical instrument to view the laser beam whether is diverged or not is potentially hazardous, therefore do not attempt to use an optical instrument to view the laser beam directly.

4.3 Electrical Safety Information

- Ventilation should be guaranteed around the device;
- Operating the device under the environment with highly inflammable gas will cause a significant safety incident;
- Wiring and other electrical facilities installation under this device working environment must be in compliance with the Building and Electrical Code which is authorised by the local authorities;
- Do not attempt to repair or modify the device without authority, if any service is needed, please contact the InterVRE (*Section 12.2: Technical Support Contact*).

5. Installation of the Device

5.1 Turn the Device On or Off

The instruction of turn the device on or off can be found in *IVR-100p Intelligent Network Test Platform User Guide*.

5.2 Install or Upgrade the Applications

All essential applications have been preinstalled and configured at the factory. Also, extra applications will be installed or existing applications will be required to upgrade, when new test modules have been purchased and installed, or newest version of the application has been purchased. Table 5.1 describes the hardware requirements for applications installing or upgrading.

Table 5.1 Application Installing or Upgrading Hardware Requirements

Name	Quantity
CD for Installation	1
Computer with USB Port	1
IVR-100p Network Test Platform	1
USB Memory Drive or USB Cable	1 or 1

Applications can be installed or upgraded by the following steps:

- Turn on the computer and insert the installation CD into the CD-ROM drive;
- Using USB memory drive or USB cable to transfer the application installation package (normally is the folder named 'Setup') from the local computer to IVR-100p Network Test Platform,
(Specific information for files transfer between the device and USB memory drive or files transfer between the device and the local computer can be seen respectively in IVR-100p User Guide);
- Run IVR-100p_TEthernet_V1.0.0.5_SETUP.exe' software;
- Click 'Setup' button.

Installation

Figure 5.1 Application Installation

5.3 Insert or Remove the Module into or from IVR-100p

(Note: Do not attempt to insert or remove a module while IVR-100p Network Test Platform is active running. The device and modules will be damaged irreparably and immediately if the module has been detached directly without the device has been shut down completely.)

5.3.1 Insert Test Module

Insert a test module into IVR-100p Network Test Platform needs to follow the steps demonstrates in below:

- Turn off the device completely;
- Put IVR-100p Network Test Platform's front panel upward (*Figure 5.2 Diagram of Placing IVR-100p Network Test Platform*);

Figure 5.2 Placing IVR-100p Network Test Platform Front Panel Upward

- Hold and place the module vertically, and make sure the locking screw hole is on the left of the connector pins,

(Note: Connector pins will be broken resulting in permanent damage to the module if the module was inserted in a wrong direction);

Figure 5.3 Inserting the Module into Device' Slots

- Slowly insert the convex edges of the module into the grooves of IVR-100p's slot;
- Push the module to the bottom of the slot, until the locking screw hole of the module has been contacted with the bottom locking screw of IVR-100p Network Test Platform;
- Put IVR-100p Network Test Platform bottom panel upward, and find the locking screw of the slot which has been inserted by the module;
- Press on the module slightly, and tighten the locking screw by using screw driver screwing clockwise. The module block must be locked tightly in the slot.

Figure 5.4 Tightening Bottom Panel Screw

The module will be detected automatically, when the device is started up again.

5.3.2 Remove Test Module

Remove a test module from IVR-100p Network Test Platform needs to follow the steps demonstrates in below:

- Turn off the device completely;
- Put IVR-100p Network Test Platform bottom panel upward, and find the locking screw of the slot which has been inserted by the module;

Installation

- Using a screw driver to loosen the locking screw entirely by screwing counter-clockwise, the module block is released from the slot;

Figure 5.5 Loosening the Bottom Panel Screw

- Put IVR-100p Network Test Platform top panel upward;
- Grab the module by its sides or by the handle and pull it out, *(Note: Do not grab the module by the connector. Serious damage will be occurred when the module has been pulled out by grabbing connector, please grab the shell of the module to pull it out);*

Figure 5.6 Pulling the Module out of the Device' Slot

- Cover empty slots by the supplied protective covers.

6. Ethernet/OTN User Interface

6.1 Start Ethernet/OTN Application

Start the Ethernet/OTN application needs to follow the following steps:

- After the module has been installed into the platform properly (*Section 5.3 Install module into IVR-100p*), start IVR-100p platform.
- IVR-100G module will be displayed on the platform's main window, then select the module;
- Click right side 'Run' button, or double-click the module to run IVR-100G Module;
- Select '100G Ethernet' or '100G OTN' to enter test application.

Figure 6.1 IVR-100p Start the Ethernet/OTN Application

Figure 6.2 Select Test Application

Interface

6.2 Ethernet Main Interface

After IVR-100G Ethernet/OTN Module has been started, and select to enter '100G Ethernet' the main interface of 100G Ethernet test will be displayed on the screen, which is comprised by Main menu; Display window; and Toolbar these 3 parts.

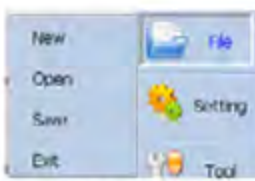

Figure 6.3 Main Interface of 100G Ethernet Application

6.2.1 Ethernet Main Menu

Ethernet Main Menu is on the right side of Display Window, and is comprised by 'Files'; 'Setting'; 'Tool'; 'Test'; 'Result'; 'Report'; 'and 'About' these 7 sub menus. Specific functions of each sub menu are demonstrated in Table 6.1.

Table 6.1 IVR-100G Ethernet Main Menu Functions List

Sub menu	Function	Diagram
 File	<ul style="list-style-type: none"> • New: Create a new test; • Open: Load the test configuration file which has been saved before; • Save: Save the current test configuration; • Exit: Exit the programme and confirmation dialogue box will appear. <p><i>(Note: The 'New' option is ONLY available when the test has been created and has not been run.)</i></p>	 Figure 6.4 File
 Setting	<ul style="list-style-type: none"> • General Setting: <ul style="list-style-type: none"> • PHY Config: Set the parameters of PHY; • PCS Config: Set the parameters of PCS; • PHY/PCS Error Insert: Insert PHY/PCS error. • External Clock: Set the parameters of external clock; • Bi-directional Test: Set the parameters of bi-directional test. <p><i>(Note: Bi-directional Test is ONLY available under RFC2544, Frame Analysis, BERT, and Y.1564.)</i></p>	

Sub menu	Function	Diagram
<p>Setting </p>	<ul style="list-style-type: none"> • RFC2544: <ul style="list-style-type: none"> • Stream Generation: Set the stream parameters of the selected test items; • RFC2544 Setup: Set the parameters of RFC2544 test. <i>(Note: The configuration items will be different under different functions.)</i>

7. Start a Test Case

7.1 Test Case under Ethernet Application

7.1.1 Start a PHY test case

Start a PHY test case needs to follow the following steps:

- Select 'PHY' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;
- Or click the 'Link Box' directly to enter 'PHY Config';
- After all the parameters have been set completely, Click  to run the test.

Table 7.1 PHY Configuration

Sub menu	Parameters
CFP Info	<ul style="list-style-type: none"> • Port Info: <ul style="list-style-type: none"> • Connector: Show the information of port connector; • Interface: Show speed rate of the interface; • Temperature: Show the CFP current temperature; • TX REF: Enable or disable TX REF, support, <ul style="list-style-type: none"> • Disable; • Network 1/8; • Network 1/16; • Network 1/64;
	<ul style="list-style-type: none"> • Physical Interface: <ul style="list-style-type: none"> • Laser: Turn on/off the laser; • Lane: Show number 0-3 4x25G optical signal channel; • Wavelength (nm): Show the detected CFP signal wavelength, support, <ul style="list-style-type: none"> • 1310nm; • 1550nm; • -- (Undefined CFP optical module); • Power: Show the power of the optical signal;
	<ul style="list-style-type: none"> • Frequency: <ul style="list-style-type: none"> • TX/RX Frequency (bps): Show the frequency of transmission and received signal; • Frequency Offset: Show the frequency offset between standard speed and the rate of the received signal; • Max Positive Offset: Show the maximum frequency offset between standard speed rate and received signal; • Max Negative Offset: Show the minimum frequency offset between standard speed rate and received signal; • Average Offset: Show the average frequency offset of the received signal; • Frequency Unit: ppm and bps.

Test

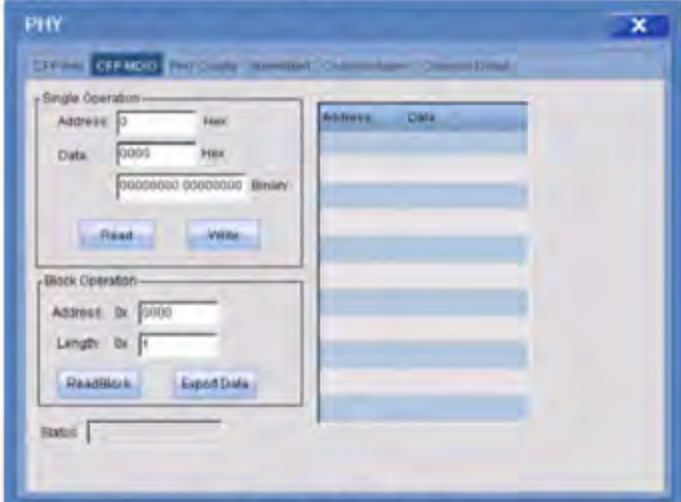

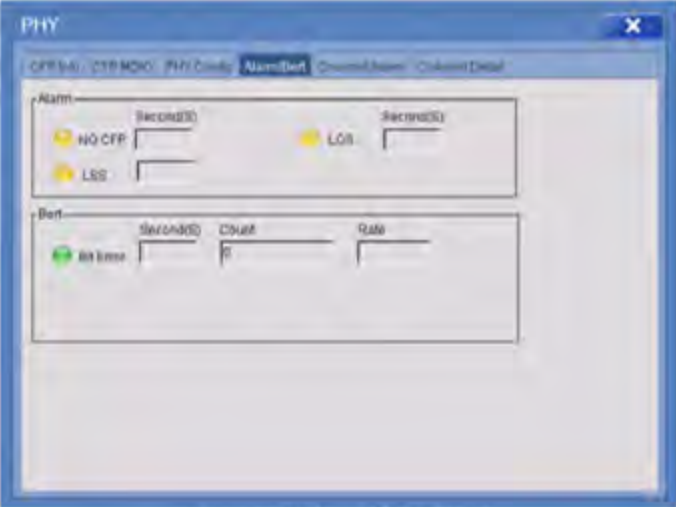

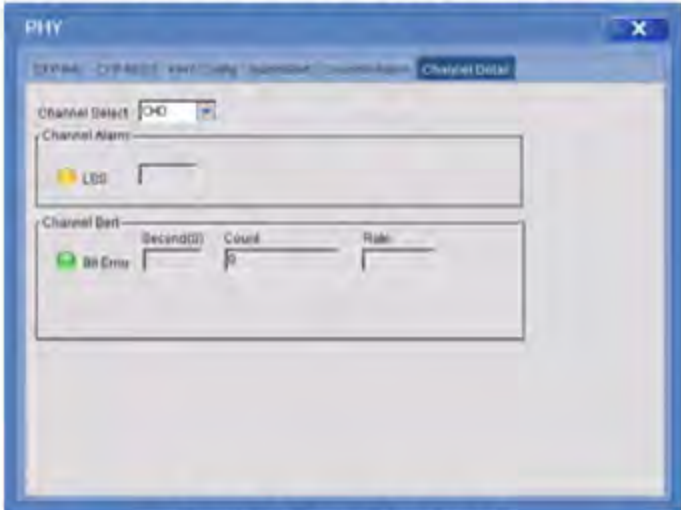

Sub menu	Parameters
CFP Info	 <p>The screenshot shows the 'PHY' window with the 'CFP Info' tab selected. It displays the following information:</p> <ul style="list-style-type: none"> Pod Info: Connector: CFP, Interface: 1000, Temperature(C): 55.9, Tx REF: Double. Physical Interface: A table with columns: Lane, I/O, Wavelength (nm), Tx Power (dBm), Rx Power (dBm), Min Rx Power(dBm), Max Rx Power(dBm), and a status button. Frequency: Tx Frequency(dBps): 10312500000, Rx Frequency(dBps): 10312499600, Frequency Offset: 0.0, Max Positve Offset: 0.0, Max Negative Offset: -200, Average Offset: -3.7, Frequency Unit: ppm, Frequency Offset(ppm): 0.0, Bps: 1.0.
CFP MDIO	<ul style="list-style-type: none"> • Read or write data (MDIO) into CFP;  <p>The screenshot shows the 'PHY' window with the 'CFP MDIO' tab selected. It displays the following information:</p> <ul style="list-style-type: none"> Single Operation: Address: 0 (Hex), Data: 0000 (Hex), Binary: 00000000 00000000. Buttons: Read, Write. Block Operation: Address: 0x 2000, Length: 0x 1. Buttons: ReadBlock, Export Data. Status: (Empty field)
PHY Config	<ul style="list-style-type: none"> • TX: <ul style="list-style-type: none"> • Test mode: Default as 20 virtual lanes; • Pattern: available <ul style="list-style-type: none"> • PRBS2^9; • PRBS2^11; • PRBS2^15; • PRBS2^20; • PRBS2^23; • PRBS2^31; • PRBS2^29; • HF; • CRPAT; • JTPAT; • SPAT; • User define; • Value: Set pattern value by user, default HEX; • Invert: Enable this option, all value in the pattern will be reversed, 1 to 0, 0 to 1; • RX: same as TX, see TX description;

Latency	 <p>The screenshot shows a dialog box titled 'RF-02544 Setting' with a 'Run' button. It contains a 'Configuration' section with the following fields: 'Test Time' (20), 'Test Count' (5), 'Initial Rate' (10.00), 'Step Rate' (10), and 'Maximum Rate' (100.00). There is also a 'Threshold Enable' checkbox (unchecked) and a 'Threshold Value' field (my).</p>

Figure 7.32 Latency Setting

7.1.4 Start a Frame Analysis Test Case

Start a Frame Analysis test case needs to follow the following steps:

- Select 'Frame Analysis' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;
- After port parameters have been set completely; select 'Stream Generation' from 'Setting' sub menu to configure data stream parameters, the detail instruction for setting data stream is demonstrated in Table 7.3 Data Stream Generation;
- After all the parameters have been set completely, Click  to run the test.

Test

7.1.5 Start a Bit Error Test Case

Start a Bit Error test case needs to follow the following steps:

- Select 'Bit Error' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;
- After port parameters have been set completely; select 'Stream Generation' from 'Setting' sub menu to configure data stream parameters, the detail instruction for setting data stream is demonstrated in Table 7.3 Data Stream Generation;
- Click  to start data transmission, then select 'Eth Error Injection' from 'Setting' sub menu to insert bit error, detail configuration can be seen in Section 8.2 Ethernet Bit Error Injection;
- Then Bit Error test has been started.

7.1.6 Start a Loopback Test Case

Start a Loopback test case needs to follow the following steps:

- Select 'Loopback' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;
- After all the parameters have been set completely, Click  to run the test.

7.1.7 Start a Y.1564 Test Case

Start an Y.1564 test case needs to follow the following steps:

- Select 'Y.1564' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;

- After port parameters have been set completely; select 'Service Setup' from 'Setting' sub menu to configure Y.1564 parameters, the detail instruction for setting data stream is demonstrated in Table 7.5 Y.1564 Service Setup;
- After all the parameters have been set completely, Click  to run the test.

Table 7.5 Y.1564 Service Setup

Test

7.1.8 Strat a User-defined Frame Test Case

Start a User-defined Frame test case needs to follow the following steps:

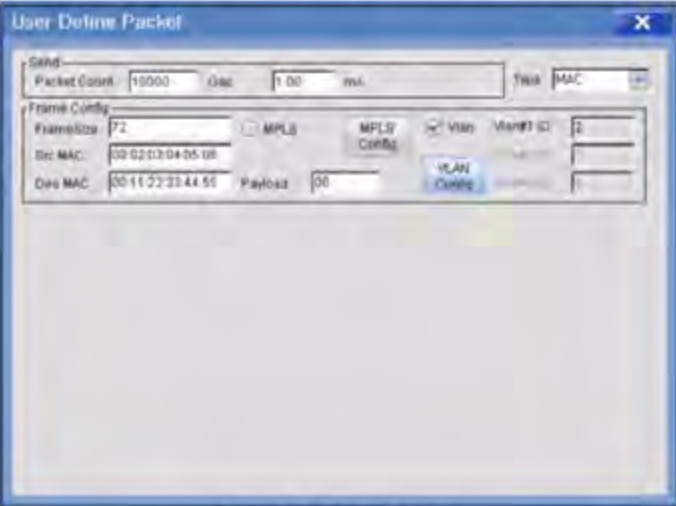

- Select 'User-defined' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'PHY Config' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.1 PHY Configuration;
- After port parameters have been set completely; select 'User Define Packet' from 'Setting' sub menu to configure user-defined packet parameters, the detail instruction for setting data stream is demonstrated in Table 7.6 User-defined Packet;
- After all the parameters have been set completely, Click  to run the test.

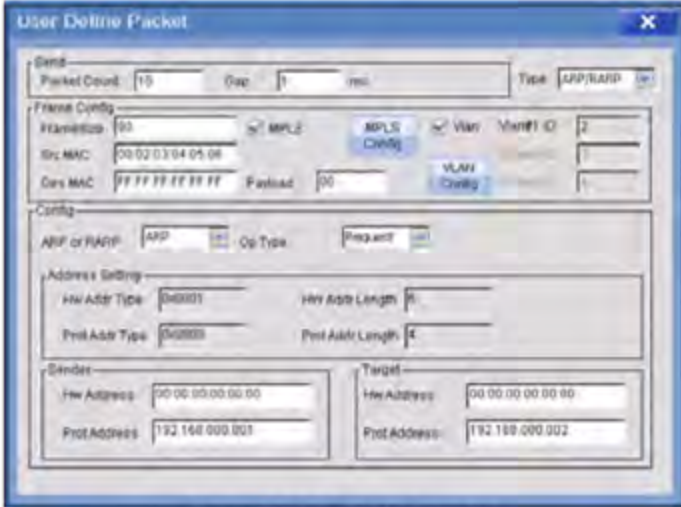

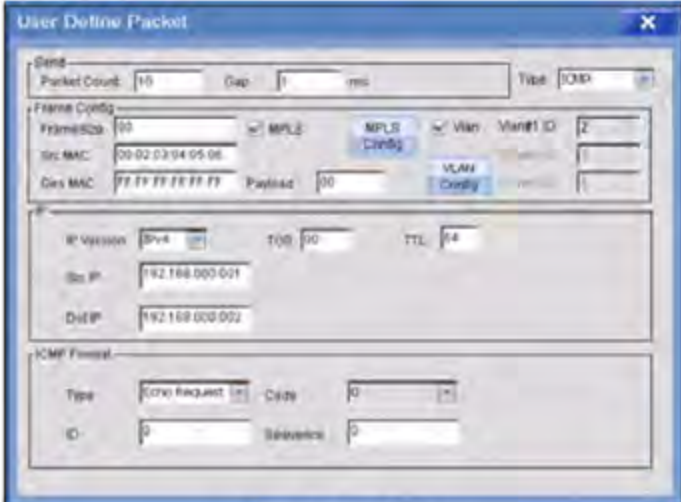

Table 7.6 User-defined Packet

Sub Menu	Parameters
General Description	<p><i>User-defined Packet includes 7 types, which are: MAC Packet; ARP/RARP Packet; IP Packet; ICMP Packet; TCP Packet; UDP Packet; and IGMP Packet.</i></p>
	<div data-bbox="571 1115 1241 1608" style="border: 1px solid black; padding: 5px;"> </div> <p style="text-align: center;">Figure 7.43 User-defined Packet</p>
MAC	<ul style="list-style-type: none"> • Send: <ul style="list-style-type: none"> • Packet Count: Set the quantity of user-defined packet transmission; • Gap (ms): Set the time interval between the 2 continuous data packets; • Type: Select data packet type, support, <ul style="list-style-type: none"> • MAC; • IP; • TCP; • IGMP; • User Define; • ARP/RARP; • ICMP; • UDP; • Pause; • Frame Configuration: <ul style="list-style-type: none"> • Frame Size: Set size for the data packet, range from 64 to 2048; • Source MAC: Set MAC address for packet source; • Destination MAC: Set MAC address for packet destination; • Payload: Set payload for the user-defined packet, range from 00 to FF;

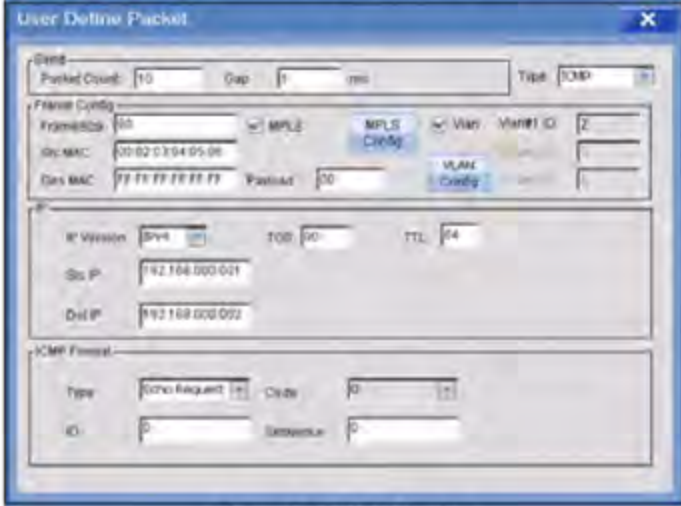

Sub Menu	Parameters
	<ul style="list-style-type: none"> • MPLS: Select to enable MPLS header, MPLS label will be added into the packet; • MPLS Configuration: Configure MPLS header; <i>(Note: This option is ONLY available when MPLS header option has been selected.)</i> <ul style="list-style-type: none"> • MAC Address: <ul style="list-style-type: none"> • Destination: Set MAC address for destination packet; • Source: Set MAC address for source packet; • VLAN: See Table 7.6 MAC: VLAN Configuration; • MPLS: <ul style="list-style-type: none"> • Enable: Select the layer of MPLS, 2 layers can be enabled in maximum; • Label: Set MPLS ID, range from 00000 to FFFFF; • EXP: 3 bits, reserved for test, currently, it is used for Cos (Class of Service); • SBit: 1 bit, the location for the last label enters the label stack, <ul style="list-style-type: none"> • Enable: 1; • Disable: 0; • TTL: Set TTL time; • CtrlW (PW MPLS Control Word): <ul style="list-style-type: none"> • Type: 0~3 bits, show the type of PW. • Flag: 4~7 bits, set flag values for PW, range from 0 to 15; • FRG: 8~9 bits, set FRG values for PW, range from 0 and 3; • Length: 10~15 bits, show the length of PW; • SeqNum: 16~31 bits, set sequence number, range from 0 to 65535.
<p>MAC</p>	 <p style="text-align: center;">Figure 7.44 MPLS Configuration Dialogue Box</p>
	<ul style="list-style-type: none"> • VLAN: Select to enable VLAN label, VLAN Label will be added into the packet; • VLAN #1/#2/#3 ID: Display the VLAN ID which has been set in VLAN configuration dialogue box; • VLAN Configuration: Configure VLAN parameters; <i>(Note: This option is ONLY available when VLAN label option has been selected.)</i> <ul style="list-style-type: none"> • Stack VLAN (Q-in-Q): select VLAN Stack Layer. As many as 3 VLAN stack layers is allowed. You can choose 3 layers of VLAN. • ID: Input VLAN ID, choose values from 1 to 4094; <i>(Note: 4095 is retention value, and 0 and 1 are reserved for special purposes.)</i> • Priority: Select the priority of VLAN, <ul style="list-style-type: none"> • 0: 000-Low PRL; • 2: 010-Low PRL; • 4: 100- High PRL; • 6: 110- High PRL; • 1: 001-Low PRL; • 3: 011-Low PRL; • 5: 101- High PRL; • 7: 111- High PRL; • Type: Select type of Ethernet, support, <ul style="list-style-type: none"> • 8100; • 88A8; • 9100; • 9200; • 9300; • Drop Eligible: Select to drop 'drop eligible' flag. <i>(Note: When VLAN types is 8100, 'drop eligible' is NON-available. This option allows Service VLAN Label (S-TAG) to deliver 8 different levels of priority, each priority has one 'drop eligible' flag. If 'drop eligible' has been set in S-TAG, or decoding table of priority indicated PCP value which has been received, has activated 'drop eligible', it means 'drop eligible' has been activated in receiving frames.)</i>

7.1.9 Start a Bi-directional Test Case

Start a Bi-directional test case needs to follow the following steps (Use RFC2544 as an example):

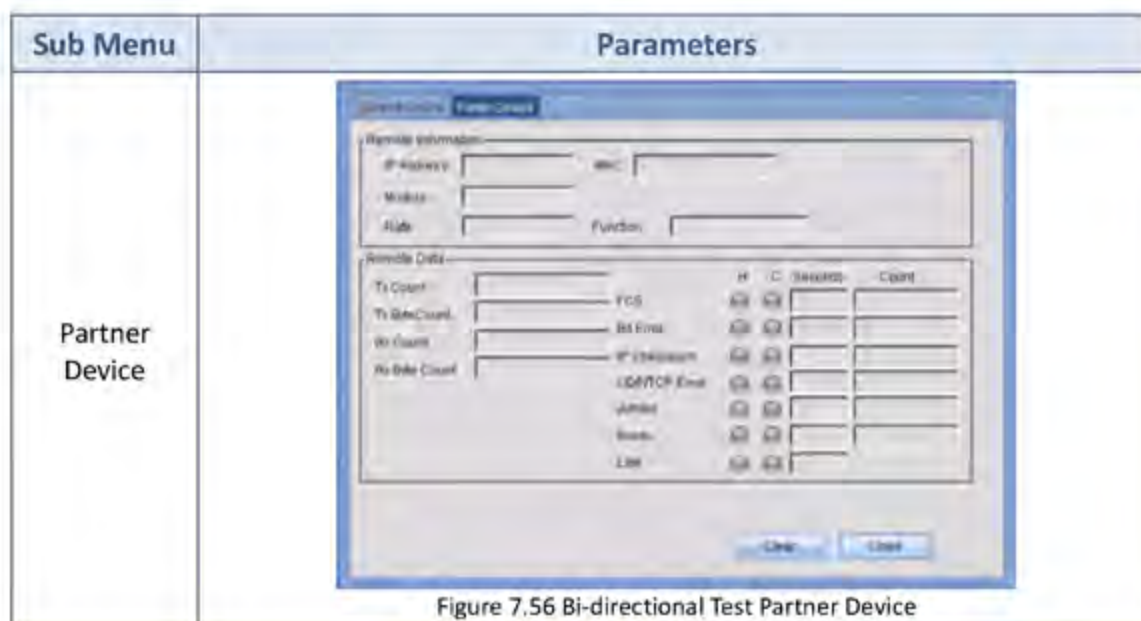

- Select 'RFC2544' from configuration box, and enter 'Setting' sub menu from Main menu;
- Select 'RFC2544 Setup' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.4 RFC2544 Setting;
- After all parameters of RFC2544 have been set completely, select 'Bidirectional' from 'Setting' sub menu to configure bi-directional test parameters, the detail instruction for setting bi-directional test is demonstrated in Table 7.7 Bi-directional Test;
- After all the parameters have been set completely, Click to run the test.

Table 7.7 Bi-directional Test

Sub Menu	Parameters
Ourselves Device	<ul style="list-style-type: none"> • Start Connect Function: Click to enable S Bidirectional Test; • Device Type: Display the type of local device;
	<ul style="list-style-type: none"> • Local Information: <ul style="list-style-type: none"> • Auto Broadcast: Select to enable auto broadcast; <i>(Note: If the remote device choose 'Auto Broadcast', local device will be scanned.)</i>

Test

Sub Menu	Parameters
Ourselves Device	<ul style="list-style-type: none"> • Auto Search: Click to search remote device automatically, the result will be displayed in the message bar; • Link status: Display the link status of current device, <ul style="list-style-type: none"> • Red: Not connected; • Green: Connected; • Remote IP: Display the IP address of connected remote device currently; • Connect/ Stop button: Click to establish or stop a connection with remote device.
	<ul style="list-style-type: none"> • Message Bar: <ul style="list-style-type: none"> • Device: Show the name or code of the remote device; • MAC: Show the MAC address information of remote device; • IP: Show the IP address information of remote device; • Remote Loopback Control: <p><i>(Note: This function is ONLY available when a remote device has been connected.)</i></p> <ul style="list-style-type: none"> • Loopback layer: Select Loopback layer, support, <ul style="list-style-type: none"> • Layer 1; • Layer 2; • Layer 3; • Layer 4; • Start Button: Click to start remote loopback control function. <div data-bbox="549 792 1230 1301" data-label="Image"> <p>The screenshot shows a software window titled 'Ourselves Device'. It contains several sections: <ul style="list-style-type: none"> Start Connect Function: A button and a 'Device Type' dropdown menu. Local Information: A section with 'Auto Search', 'Link Status', and 'Link Down' buttons, and a 'Remote IP' input field. Device Information: A table with columns for 'Device', 'MAC', and 'IP', currently empty. Remote Loopback Control: A section with radio buttons for 'Layer 1', 'Layer 2', 'Layer 3', and 'Layer 4', and a 'Start' button. At the bottom, there are 'Clear' and 'Close' buttons. </p> </div> <p style="text-align: center;">Figure 7.55 Bi-directional Test Ourselves Device</p>

7.2 Start a Test Case under OTN Application

Currently, IVR-100G module only have done the mapping path ONT4. Rest path will be developed gradually.

7.2.1 Start an OTN4 Test Case

Start an OTN4 test case needs to follow the following steps:

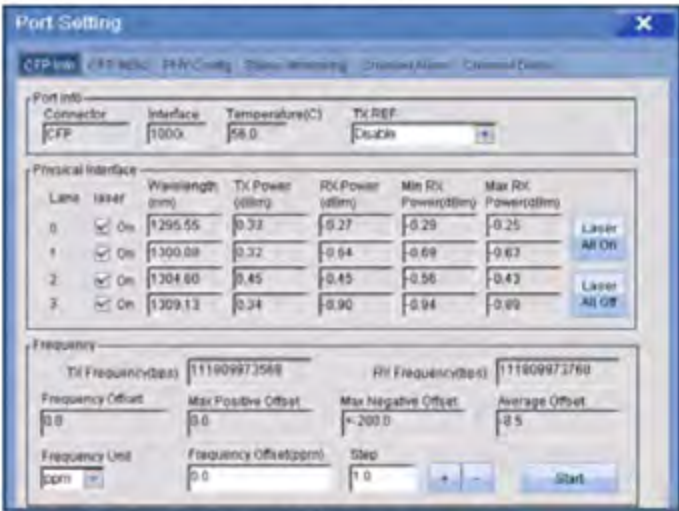

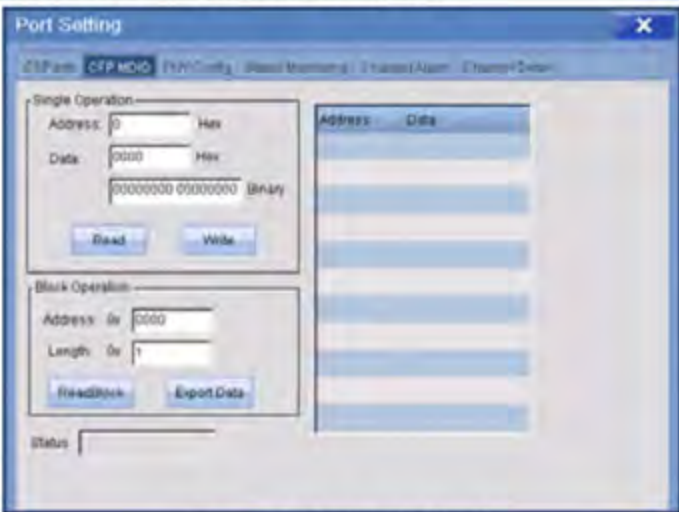

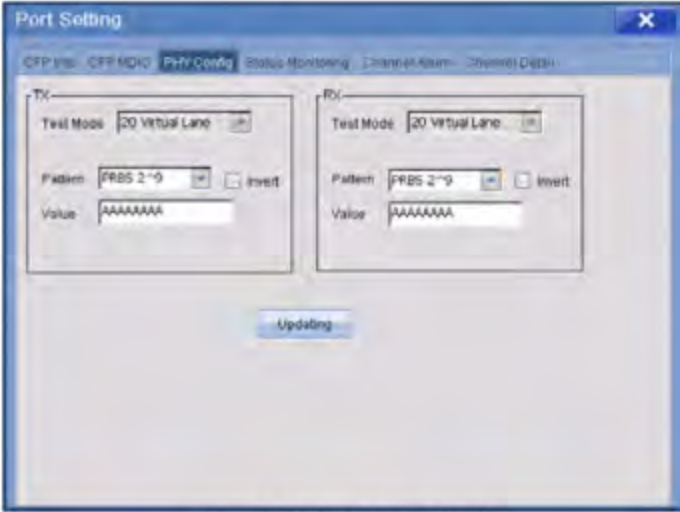

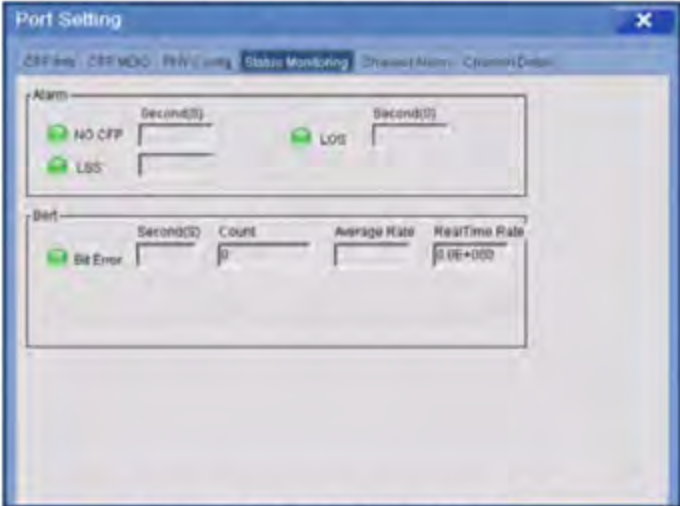

- Select 'Mapping Setting' from 'Setting' sub menu from Main menu;
- Or click the 'Link Box' directly to enter 'Mapping Setting';
- Or click  button from 'Bottom Ribbon' to enter 'Mapping Setting';
- Select 'Port' from 'Setting' sub menu to configure port parameters, the detail instruction for setting port parameters is demonstrated in Table 7.7 Port Configuration;
- After all parameters of data stream have been set completely, select 'OTN4' from 'Setting' sub menu to configure OTN4 parameters, OTN4 can be set as OTL4, OTU4, ODU4, OPU4. The detail instructions for each is demonstrated in Table 7.8 OTL4 Setting, Table 7.9 OTU4 Setting, Table 7.10 ODU4, and Table 7.11 OPU4.
- After all the parameters have been set completely, Click  to run the test.

Table 7.8 Port Configuration

8. Advanced Test Function

Advanced test function are all under 100G Ethernet Application.

8.1 PHY/PCS Error Injection

Instruction of PHY/PCS error is ONLY available under PHY/PCS test. Instruction of PHY/PCS test have been demonstrated in Section 7.1.1 Start a PHY Test Case and Section 7.1.2 Start a PCS Test Case.

Table 8.1 PHY/PCS Error Injection

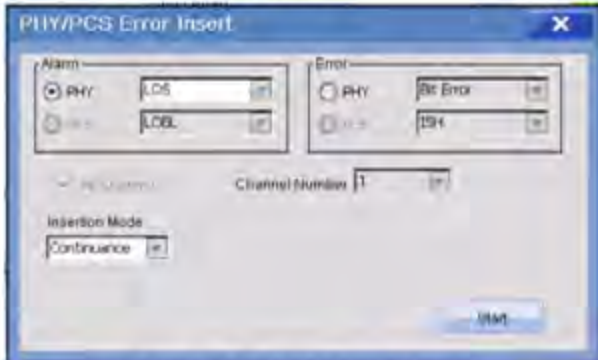

Sub Menu	Parameters
PHY/PCS Error Injection	<ul style="list-style-type: none"> Alarm (PHY): Select PHY insert error alarm types, support, <ul style="list-style-type: none"> • LOS; • LSS;
	<ul style="list-style-type: none"> Alarm (PCS): Select PCS insert error alarm types, support, <ul style="list-style-type: none"> • LOBL; • LOAML; • HBER; • LSS;
	<ul style="list-style-type: none"> Error (PHY): Select PHY insert error types, support, <ul style="list-style-type: none"> • Bit Error;
	<ul style="list-style-type: none"> Error (PCS): Select PCS insert error types, support, <ul style="list-style-type: none"> • ISH; • IAM; • BIP8 Bit; • BIP8 Err; • Bit Error.
	<ul style="list-style-type: none"> • ALL Channel: Select to insert errors into all channels;
	<ul style="list-style-type: none"> • Channel Number: Select to insert errors into one particular channel;
	<ul style="list-style-type: none"> Insertion Mode: Select insert mode, support, <ul style="list-style-type: none"> • Singe; • Continuance; • Burst; • Rate; • Alternative; • Framing.
	

Figure 8.1 PHY/PCS Error Injection

Advance

8.2 Ethernet Bit Error Injection

Instruction of bit error injection has been demonstrated in Section 7.1.5 Start a Bit Error Test Case. Bit error injection is ONLY available under BERT test.

Table 8.2 Bit Error Injection

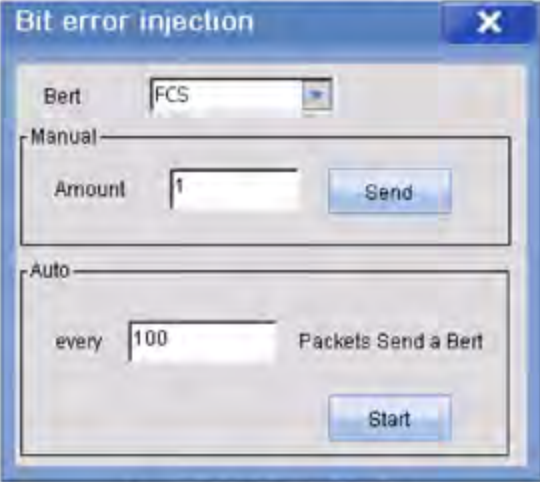

Sub Menu	Parameters
Bit Error Injection	<ul style="list-style-type: none">• Bert Type: Select bit error injection types, support,<ul style="list-style-type: none">• Bit Error;• FCS;• UDP/TCP;• OOS;
	<ul style="list-style-type: none">• Manual:<ul style="list-style-type: none">• Amount: Set quantity for inserting bit error, range from 1 to 16000000, <i>(Note: The default value is 1.)</i>• Send Button: Click to inject bit error manually;
	<ul style="list-style-type: none">• Auto:<ul style="list-style-type: none">• Every: Set interval of bit error insertion, range from 1 to 16000000; <i>(Note: The default value is 1.)</i>• Start Button: Click to insert bit error automatically.
	

Figure 8.2 Bit Error Injection

8.3 External Clock

Set External Clock needs to follow the following step:

- Select 'External Clock' from 'Setting' sub menu to set RX external clock. Detail instruction has been demonstrated in Table 8.3 External Clock.

Table 8.3 External Clock

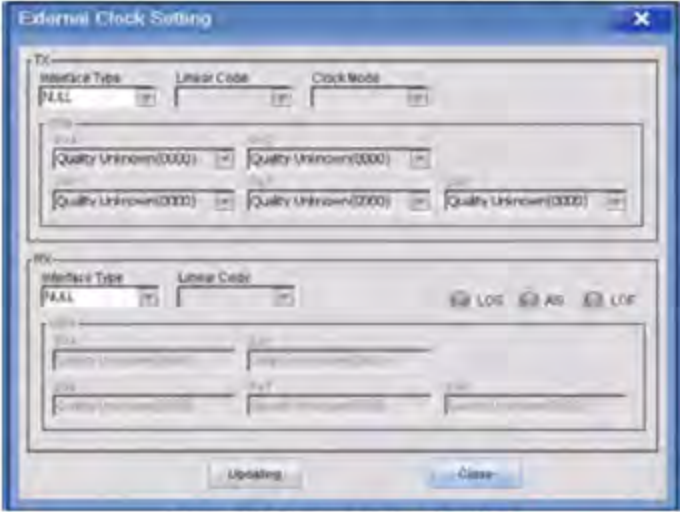

Sub Menu	Parameters
External Clock	<ul style="list-style-type: none"> • Interface Type: Select types of received clock, support, <ul style="list-style-type: none"> • NULL; • DS1; • E1; • 2MHz;
	<ul style="list-style-type: none"> • Line Coding: Select types of the interface line coding, support, <ul style="list-style-type: none"> • For DS1: B8ZS; • For E1: HDB3; • For 2MHz: NON-available;
	<ul style="list-style-type: none"> • Alarm: include, <ul style="list-style-type: none"> • LOS; • AIS; • LOF;
	<ul style="list-style-type: none"> • SSM: Set Sa4, Sa5, Sa6, Sa7 and Sa8 values, (Note: This option is ONLY available when the interface type is E1.) <ul style="list-style-type: none"> • 0000: Quality unknown; • 0001: Reserved; • 0010: ITU G.811; • 0011: Reserved; • 0100: SSU-A; • 0101: Reserved; • 0110: Reserved; • 0111 Reserved; • 1000: SSU-B; • 1001: Reserved; • 1010: Reserved; • 1011: ITU-T G.813 Option; • 1100: Reserved; • 1101: Reserved; • 1110: Reserved; • 1111: Do not use for synchronization;
	

Figure 8.3 External Clock Setting

(Note: 'Updating' button needs to be clicked after the configuration has been done, which is in order to download the configuration into the hardware.)

Advance

8.4 Frame Loss Test

Set Frame Loss Test needs to follow the following steps:

- Select 'Frame Lost Test' from 'Setting' sub menu to set frame loss test. Detail instruction has been demonstrated in Table 8.4 Frame Loss Test.

(Note: Frame Loss Test is ONLY available when loopback test has been started.)

Table 8.4 Frame Loss Test

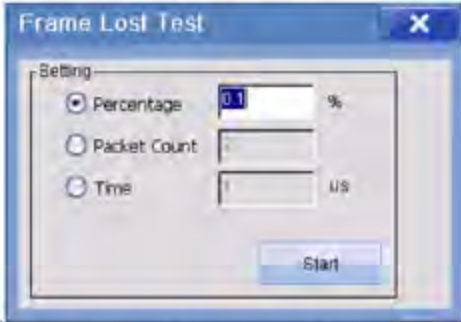

Sub Menu	Parameters
Frame Loss Test	<ul style="list-style-type: none"> • Percentage: Set frame loss ratio, range from 0.1%~99.9%;
	<ul style="list-style-type: none"> • Packet Count: Set quantity of frame loss packet;
	<ul style="list-style-type: none"> • Time: Set frame loss time;
	<ul style="list-style-type: none"> • Start Button: Click to start frame loss test.
	

Figure 8.4 Frame Lost Test

8.5 Loopback Setting

Set Loopback needs to follow the flowing steps:

- Select 'Loop set' from 'Setting' sub menu to set loopback. Detail instruction has been demonstrated in Table 8.5 Loopback Setting.

(Note: Loopback/Throughout setting is ONLY available under loopback test.)

Table 8.5 Loopback Setting

Sub Menu	Parameters
Loopback Setting	<ul style="list-style-type: none"> • Loop Drop Enable: Select loop filter to filter information, support, <ul style="list-style-type: none"> • Control Loss; • Other Packet Loss; • Filtered Loss.
	

Figure 8.5 Loop Set

9. Tool

9.1 Ping Setup

Set Ping Setup needs to follow the following step:

- Select 'Ping Setup' from 'Tool' sub menu to set ping. Detail instruction has been demonstrated in Table 9.1 Ping Setup.

Table 9.1 Ping Setup

Sub Menu	Parameters
Ping Setup	<ul style="list-style-type: none"> • Port Selection: Select the test port, support, <ul style="list-style-type: none"> • Port (in the Ethernet Test module); • Host port (located on the right side of the test platform); • Ping Setup: <ul style="list-style-type: none"> • Report: Click to generate a test report; • Destination Address: Set IP address for destination; • Destination Address Ping button: Click to ping destination IP address; • URL: Set destination URL; • URL Ping Button: Click to ping destination URL; • Packet Size: Set the size for ping packet; • Packet Count: Set quantity of ping packet for transmission; • TTL: Set live time for ping packet; • Interval: Show interval time between two packets; • Clear Button: Click to clear textbox; • Textbox: Show the ping result.
	 <p style="text-align: center;">Figure 9.1 Ping Setup</p>

Tool

9.2 Trace Route

Set Trace Route needs to follow the following step:

- Select 'Trace Route' from 'Tool' sub menu to set trace route. Detail instruction has been demonstrated in Table 9.2 Trace Route.

Table 9.2 Trace Route

Sub Menu	Parameters
Trace Route	<ul style="list-style-type: none">• Port Selection: Select the test port, support,<ul style="list-style-type: none">• Port (in the Ethernet Test module);• Host port (located on the right side of the test platform);• Trace Route Setup:<ul style="list-style-type: none">• Destination Address: Set IP address for destination;• Start Button: Click to start to trace destination IP address;• URL: Set destination URL;• URL Start Button: Click to start to trace destination URL address;• Textbox: Show the result of trace route.
	

Figure 9.2 Trace Route

9.3 Flow Control

Set Flow Control needs to follow the following step:

- Select 'Flow Control' from 'Tool' sub menu to set flow control. Detail instruction has been demonstrated in Table 9.3 Flow Control.

Table 9.3 Flow Control

Sub Menu	Parameters
Flow Control	<ul style="list-style-type: none"> • Insert Stoppage Time Quantity: <ul style="list-style-type: none"> • Packet Stoppage Time: Set suspended time for packet transmission; • Unit: us; • Send Button: Click to insert suspended time during packet transmission; • Flow Control RX: Click to enable RX flow control; • Statistics: <ul style="list-style-type: none"> • Pause Time: Count the suspended time of the received flow control frame, include, <ul style="list-style-type: none"> • Total; • Last; • Maximum; • Minimum; • Unit: us; • Pause Frame Count: Count suspended frames of sending and received, include, <ul style="list-style-type: none"> • TX; • Rx.
	

Figure 9.3 Flow Control

Tool

9.4 FTP

Set FTP needs to follow the following step:

- Select 'FTP' from 'Tool' sub menu to set FTP. Detail instruction has been demonstrated in Table 9.4 FTP.

(Note: The device needs to be connected with internet by Ethernet port, which is on the right side of the device, in order to activate FTP function.)

Table 9.4 FTP

Sub Menu	Parameters
FTP	<ul style="list-style-type: none"> • Host: Input the server IP address;
	<ul style="list-style-type: none"> • User: Input FTP User name;
	<ul style="list-style-type: none"> • Pass: Set FTP password;
	<ul style="list-style-type: none"> • Upload/Download Message Box: Display information which has been uploaded or downloaded;
	<ul style="list-style-type: none"> • Status: Display the current FTP status;
	<ul style="list-style-type: none"> • Remote Site: Display the file information of remote FTP site, include, <ul style="list-style-type: none"> • File name; • File size (byte);
	<ul style="list-style-type: none"> • Connect Button: Click to connect the FTP site;
	<ul style="list-style-type: none"> • Download button: Click to download the files from FTP;
	<ul style="list-style-type: none"> • Upload Button: Click to upload local files to FTP;
	<ul style="list-style-type: none"> • D_Rate Test: Click to test download speed and display in the information bar;
	<ul style="list-style-type: none"> • Upload Speed Test: Click to test upload speed and display in the information bar;
	<ul style="list-style-type: none"> • Pause: Click to stop file upload/download.
	 <p>The screenshot shows a window titled 'FTP' with the following elements: <ul style="list-style-type: none"> Host: 192.168.0.100 User: anonymous Pass: [masked] Status: [empty field] Remote site: [empty field] File Name: [empty field] File Size (Byte): [empty field] Buttons: Connect, Download, Upload, D_Rate Test, U_Rate Test, Stop </p>

Figure 9.4 FTP

9.5 HTTP

Set HTTP needs to follow the following step:

- Select 'HTTP' from 'Tool' sub menu to set HTTP. Detail instruction has been demonstrated in Table 9.5 HTTP.

(Note: The device needs to be connected with internet by Ethernet port, which is on the right side of the device, in order to activate HTTP function.)

Table 9.5 HTTP

Sub Menu	Parameters
HTTP	<ul style="list-style-type: none"> • HTTP Address: Input HTTP address for test;
	<ul style="list-style-type: none"> • Count: Set times for HTTP test;
	<ul style="list-style-type: none"> • Start Button: Click to start or stop HTTP test;
	<ul style="list-style-type: none"> • Status: Display test status of the connected HTTP;
	<ul style="list-style-type: none"> • Result: Display test result of connected HTTP;
	<ul style="list-style-type: none"> • Test Information Box: Display test Information of the connected HTTP;
	<ul style="list-style-type: none"> • Strat Web Browser Button: Click to open the web of HTTP address.
	 <p>The screenshot shows a window titled 'HTTP' with a close button (X) in the top right corner. It contains several input fields and buttons: <ul style="list-style-type: none"> 'Http Address' field with the text 'http://www.baidu.com' entered. 'Count' field with the value '1'. 'Link Test' button with a 'Start' sub-button. 'Status' field, currently empty. 'Result' field, currently empty. A large empty text area below the 'Result' field. 'Start Web Browser' button at the bottom. </p>

Figure 9.5 HTTP

Tool

9.6 Online Service Scan

Set Online Service Scan needs to follow the following step:

- Select 'Online Service Scan' from 'Tool' sub menu to set online service scan. Detail instruction has been demonstrated in Table 9.6 Online Service Scan.

Table 9.6 Online Service Scan

Sub Menu	Parameters
Online Service Scan	<ul style="list-style-type: none"> • Scan Mode: Support, <ul style="list-style-type: none"> • Manual; • Auto;
	<ul style="list-style-type: none"> • Scan Type: Support, <ul style="list-style-type: none"> • Destination MAC; • Source MAC; • VLAN Id; • Vlan2 Id; • MPLS Label; • MPLS2 Label;
	<ul style="list-style-type: none"> • Clear: Click to clear data;
	<ul style="list-style-type: none"> • Start: Click to start online scan;
	<ul style="list-style-type: none"> • Manual Setting: <ul style="list-style-type: none"> • Address Box: Set address information manually; • Add: Click to the address information after the information has been inputted in address box; • Modify: Click to modify the address information which has been selected; • Delete: Click to delete the address information which has been selected; • Delete all: click to delete all address information;
<ul style="list-style-type: none"> • Scan Result: Display the result information, include, <ul style="list-style-type: none"> • No.; • ID; • Count; • Fcs; • IP error; • Bandwidth; • Utilisation; 	
<div data-bbox="549 1249 1230 1756" data-label="Image"> </div>	

Figure 9.6 Online Service Scan

9.7 Filter/Capture

Set Filter/Capture needs to follow the following step:

- Select 'Filter or Capture' from 'Tool' sub menu to set filter or capture. Detail instruction has been demonstrated in Table 9.7 Filter/Capture.

Table 9.7 Filter/Capture

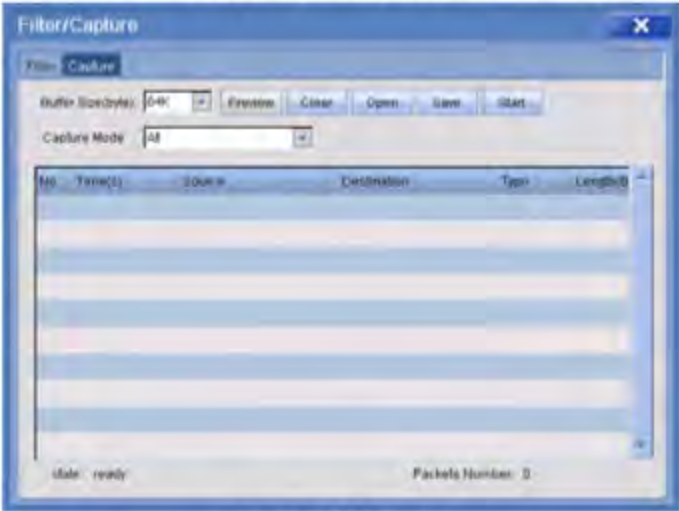

Sub Menu	Parameters
Filter	<ul style="list-style-type: none"> • Filter: Include, <ul style="list-style-type: none"> • Destination MAC; • Source MAC; • Protocol (4 layer); • Destination IP; • Source IP; • Destination Port; • Source Port; • VLAN; • MPLS Label; • D_IPv6 Key; • D_IPv6 Mask; • S_Ipv6 Key; • S_IPv6 Mask.
	<ul style="list-style-type: none"> • Enable: Click to enable this filter;
	<ul style="list-style-type: none"> • Filter Packet Count: Show the actual quantity of the packets have been filtered.
	 <p>The screenshot shows a 'Filter/Capture' dialog box with a 'Filter' tab selected. It contains a table with columns for 'Key' and 'Mask', and a column for 'Enable'. The parameters listed are: Destination MAC, Source MAC, Protocol (4 layer), Destination IP, Source IP, Destination Port, Source Port, VLAN, MPLS Label, DIPv6 Key, DIPv6 Mask, SIPv6 Key, and SIPv6 Mask. Each parameter has a corresponding input field and an 'Enable' checkbox. At the bottom right, there is a 'Filter Packet Count' field showing '0'.</p>
Capture	<ul style="list-style-type: none"> • Buffer Size (byte): Select the buffer size for storing capture data, support, <ul style="list-style-type: none"> • 16K; • 64K; • 1M; • 8M; • 16M; • 32M; • 48M;
	<ul style="list-style-type: none"> • Capture Mode: Select capture mode, support, <ul style="list-style-type: none"> • All; • Filter; • FCS OK; • FCS Error; • IP Check Error; • UDP/TCP Check Error; • UDP/TCP/IP Check Error;
	<ul style="list-style-type: none"> • Preview Button: Click to preview the packet information which has been captured;
	<ul style="list-style-type: none"> • Clear Button: Click to clear packet information which has been captured;

Figure 9.7 Filter

Tool

Sub Menu	Parameters
Capture	<ul style="list-style-type: none"> • Open Button: Click to open the packet which has been captured;
	<ul style="list-style-type: none"> • Save Button: Click to save packet information which has been captured;
	<ul style="list-style-type: none"> • Start/Stop Button: Click to start or stop to capture packet;
	<ul style="list-style-type: none"> • Capture Information Box: Display information of packet has been captured, include, <ul style="list-style-type: none"> • No.; • Time (s); • Source; • Destination; • Type; • Length (Byte);
	<ul style="list-style-type: none"> • Status: Display the status of packet capture;
	<ul style="list-style-type: none"> • Packets Number: Display the quantity of the captured packets.
	 <p style="text-align: center;">Figure 9.8 Capture</p>

9.8 Setting

Set Test Duration and Alarm Bell need to follow the following step:

- Select 'Setting' from 'Test' sub menu to set test duration and alarm bell. Detail instruction has been demonstrated in Table 9.8 Setting.

Table 9.8 Setting

Sub Menu	Parameters
Setting	<ul style="list-style-type: none"> • Test Duration Control: <ul style="list-style-type: none"> • Enable Test Duration Control: Click to enable test duration control; • Fixed Mode: Select the fixed test duration mode, support, <ul style="list-style-type: none"> • 15 m; • 24h; • 3d; • User-defined Mode: Select user-defined mode to set the test end time, support, <ul style="list-style-type: none"> • Day; • Hour; • Minute; • Second;
	<ul style="list-style-type: none"> • Test Start time Control: <ul style="list-style-type: none"> • Enable Test Start Time Control: Click to enable test start time control; • Time Setting: Set test start time, support, <ul style="list-style-type: none"> • Year; • Day; • Minute; • Month; • Hour; • Second;
	<ul style="list-style-type: none"> • Alarm Bell Control: <ul style="list-style-type: none"> • Enable Alarm Bell Control: Click to enable alarm bell. <div data-bbox="560 1014 1214 1494" style="border: 1px solid black; padding: 10px; margin-top: 10px;"> <p style="text-align: right; margin: 0;">Setting ✖</p> <hr/> <p>Test duration control</p> <p><input type="checkbox"/> Enable test duration control</p> <div style="margin-top: 5px;"> <input checked="" type="radio"/> Fixed Mode: <input type="text" value="15 minutes"/> <input type="text" value="00"/> </div> <div style="margin-top: 5px;"> <input type="radio"/> User-defined Mode: <input type="text" value=""/> Day <input type="text" value=""/> Hour <input type="text" value=""/> Minute <input type="text" value=""/> Second </div> <hr/> <p>Test Starttime Control</p> <p><input type="checkbox"/> Enable test starttime control</p> <div style="margin-top: 5px;"> <input type="text" value=""/> year <input type="text" value=""/> month <input type="text" value=""/> day <input type="text" value=""/> hour <input type="text" value=""/> min <input type="text" value=""/> sec </div> <hr/> <p>Alarm Bell Control</p> <p><input checked="" type="checkbox"/> Enable Alarm Bell</p> <div style="text-align: center; margin-top: 10px;"> <input type="button" value="OK"/> <input type="button" value="Cancel"/> </div> </div>

	<ul style="list-style-type: none"> • Test Message: Display the information during the test.
	 <p>The screenshot shows a window titled 'Y.1564 Results' with a close button. It contains two text input fields at the top: 'Test State' and 'Test Message'. Below these is a table with the following columns: 'Test Num', 'Data', '(G)Mbps', 'FLR', 'MAX FTD (ms)', and 'MAX FDV (ms)'. The table has approximately 10 rows of data, with alternating light blue and light pink background colors for the rows.</p>

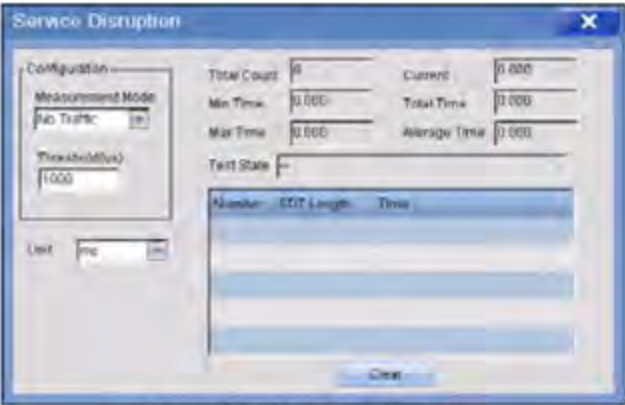

Figure 10.13 Y.1564

10.4 Service Disruption

Set Service Disruption needs to follow the following steps:

- Select 'Service Disruption' from 'Result' sub menu to set service disruption. Detail instruction has been demonstrated in Table 10.4 Service Disruption.

Table 10.4 Service Disruption

Sub Menu	Parameters
Service Disruption	<ul style="list-style-type: none"> • Configuration: <ul style="list-style-type: none"> • Measurement Mode: Select the service disruption measurement mode, support, <ul style="list-style-type: none"> • No Traffic: Indicate the time between the last frame has been received and a new frame has been received, or the time between the last frame has been received and the end of test period; • Threshold (us): Set value for service disruption test threshold, range from 1 to 100,000; <p><i>(Note: When service disruption time is longer than the threshold, it will be regarded as one disruption.)</i></p>
	<ul style="list-style-type: none"> • Statistic: <ul style="list-style-type: none"> • Total Disruption Count: Display the times of SDT happened; • Minimum: Show the shortest disruption time which has been measured; • Maximum: Show the longest disruption time which has been measured; • Average: Show the average disruption time; • Current: Show the current disruption time caused by traffic absence or defect detection; • Unit: Select time unit, support, <ul style="list-style-type: none"> • ms; • s;
	 <p style="text-align: center;">Figure 10.14 Service Disruption</p>

Maintenance

11. Maintenance

Please follow the following instruction to maintain the device in order to long term operation with high accuracy and precision.

- Clean optical connectors every time before use;
- Avoid dust, dirt, and ash;
- Use slightly wet cloth to clean the device shell;
- Store the device under clean and dry environment and avoid direct sunshine;
- Avoid the high humidity and great temperature fluctuations environment;
- Avoid the fiercely vibration and impact;
- If any liquid has been spurted to the device or inside the device, please shut down the device immediately, and dry the device completely.

12. Troubleshooting

12.1 Common Problems Solutions

Table 12.1 describes some common problems and solutions of the module.

Table 12.1 Common Problems and Solutions

Phenomenon	Cause	Solution
Laser LED is off and the connector do not generate the signal	<ul style="list-style-type: none"> • Laser is off; 	<ul style="list-style-type: none"> • Turn on the laser;
	<ul style="list-style-type: none"> • The rate of XPF optical module which has been inserted does not match with the test case; 	<ul style="list-style-type: none"> • Make sure CFP module which has been inserted support the speed of the test case;
	<ul style="list-style-type: none"> • CFP optical module is not compatible with IVR-100G module; 	<ul style="list-style-type: none"> • Make sure to use the an appropriate CFP optical module.

12.2 Technical Support Contact

If any other problems occurs, please contact InterVRE technical support or customer service immediately with product name, serial number (*which can be found in product identification label*), and a short description of the problem, which can make our technical supporters to solve your problems as soon as possible. Contact detail is demonstrated in below:

Technical Support

Tel: +52 5584374485 / +52 5621385218

Email: jesica.garcia@intervre.com / heber.vallejo@intervre.com

12.3 Transportation

Transportation environmental requirements must be strictly followed the Environmental Guidelines (*Section 3.1: Environmental Guidelines*). Improper and inappropriate operation has relatively high probability to cause permanent damage to the device. Follow the following instruction could minimise the possibility of damage occurrence:

- Use the device's original package to pack the device during transportation;
- Avoid to transport the device under the high humidity and great temperature fluctuation environment;

Troubleshooting

- Avoid direct sunlight;
- Avoid the fiercely vibration and impact.

13. Warranty

13.1 Warranty Statement

InterVRE guarantees this device will be warranted for 3 years from the date of initial shipment against the defects caused by material or manufacture.

During the warranty period, InterVRE has authority to repair, replace, or issues credit for any defective products. Free examination and adjustment service for the defective products which need to be repaired, or the products which have an inaccurate default calibration problem also will be provided during the warranty period. However, if the device was delivered back to the factory for examining an inaccurate default calibration problem, but eventually the examination result shows all the measurements meet the requirements which have been published in public, standard calibration fee will be charged by InterVRE even the product is in the warranty period.

The warranty will invalid if:

- Device has been opened or repaired by unauthorised person or non-InterVRE employees;
- Warranty sticker has been removed, or case has been opened without permission;
- Device's serial number has been modified, erased, or removed;
- Device has been damaged by misuse, or accident.

13.2 Disclaimer

InterVRE shall have no liability for any loss or damage resulting from the usage of the product, any performance failure of other items which is connected with the product, misuse or unauthorised modification of the product and its accessories and software. Also InterVRE shall have no liability for any loss or damage caused by force majeure or nature related to.

InterVRE reserves all the right to change and modify the product design and structure. InterVRE shall have no liability to modify any components of the products to meet the customer requirements after the products have been purchased. Accessories,

Warranty

including but not limited to fuse, LED indicators, batteries and universal interfaces (EUI) used with InterVRE products are not covered by this warranty.

The warranty excludes the any loss or damage resulting from improper or inappropriate usage or installation, normal tear and wear, accident, negligence, fire, water, lightning strike or other force majeure of nature, which are beyond InterVREs responsibility.

13.3 Service and Repairs

InterVRE commits to provide product repair service for 5 years after the date of the product has been purchased. Following instruction may be helpful, if the device required a technical support or repair service:

- Please call InterVRE's technical support group (*Section 12.2: Technical Support Contact*), type of service which is the device required will be determined by InterVRE's technical support employees;
- If the device must be returned to InterVRE or an authorised service centre, InterVRE's technical support employees will issue a Return Merchandise Authorisation (RMA) number and provide an address for returning;
- If possible, back up the device data before sending it back for repairing;
- Pack the device use its original package, please attach a detail report of defect and situation has been observed;
- Please deliver the device to the address which is provided by InterVRE's technical support group, and RMA number must be attached on the parcel otherwise the parcels will be rejected by InterVRE (*Section 13.1: Warrant Statement*).

The device will be delivered back to customers immediately when repair or maintenance has been done, and a report with fully detail repair or maintenance information will be attached with the device as well. If the device is not in the warranty period, a receipt of the cost of the repair or maintenance service will be invoiced and attached to the report. If the device is in the warranty period, service fee will not be charged to the customers including the delivery fee for returning the device back, but delivery insurance will be at customer's expense.
